## Experience

---

### Full-Stack & Mobile Developer, Yakeey

Jun 2025 – Present

- Developed web and mobile solutions using **React/Next.js**, **Spring Boot**, and **Flutter**, with modern interfaces based on **Tailwind CSS** and **styled-components**.
- **Internal Yakeey Projects:**
  - Built the landing page "**Financer mon projet**" on **yakeey.com**.
  - Contributed to **Yakeey-UI**, a standardized reusable component library across all Yakeey platforms.
- **Collaborative Projects with CIH Bank:**
  - **CIH Landing Front** — Developed the dashboard enabling CIH agents to view, approve, or cancel real estate credit requests.
  - **CIH Parcours Web** — Maintained and improved the user credit request flow, guiding clients to input their information to obtain tailored credit offers.
  - **Cockpit Front** — Contributed to the platform allowing users to upload credit documents and experts to validate or reject requests based on eligibility.
  - **CIH Mobile App** — Designed and implemented the simulation and credit request module, including document upload and expert tracking.

### Frontend Developer, The Forge (Startgate)

Apr 2025

- Developed a water purification MVP with real-time feedback and an intuitive user interface using **ReactJS**.

### Backend Developer, GoQuant

Feb 2025 – Mar 2025

- Designed and implemented multi-threaded trading algorithms in **C++**, reducing order execution latency by 30% and improving overall system performance.
- Optimized the core trading platform code, enhancing stability, scalability, and concurrent process management.
- Developed **Bash** scripts to automate client request testing and simulate high-frequency trading scenarios under real conditions.

### Software Developer, Freelance

Jan 2022 – Mar 2022

- Developed a desktop application for rotating team communication using **Python** Eel, **JavaScript**, and **HTML/CSS**, creating a modern, interactive interface.

### Methods Preparation Technician, LPF Casablanca (Aerospace Industry)

Jan 2021 – Jan 2022

- Planned team tasks using **MS Project** and performed **2D/3D CAD** designs with **TopSolid**.
- Represented the technical team in meetings with clients such as **Rolls-Royce** and **SAFRAN**.

### CAD Instructor (Part-Time), Management Digital School

Jan 2021 – Jun 2021

- Taught students the fundamentals of mechanical manufacturing and computer-aided design (CAD).

## Projects

---

### HTTP Web Server

[github.com/mohammedhrima/webserver](https://github.com/mohammedhrima/webserver)

- Built a high-performance HTTP Web Server in **C++**, following RFC standards.
- Designed to efficiently serve static content, with an architecture similar to **Nginx**.
- Created a tester to simulate client requests.

### Compiler (Ura-lang)

[github.com/mohammedhrima/ura-lang/](https://github.com/mohammedhrima/ura-lang/)

- Designed a programming language inspired by **Python** with static typing, integrating an intermediate representation for code optimization.
- Generated assembly code and automated testing via **Bash**, without external dependencies.

### Ray Tracer (Mini 3D Engine)

[github.com/mohammedhrima/raytracer/](https://github.com/mohammedhrima/raytracer/)

- Built a software-based **ray tracing engine** in **C++** to render 3D scenes with spheres, planes, and light sources.
- Implemented core graphics concepts including **ray-object intersections**, shadows, and reflections.
- Focused on performance, mathematical correctness, and low-level control without external graphics libraries.

### Frontend Framework (UraJS)

[github.com/mohammedhrima/urajs](https://github.com/mohammedhrima/urajs)

- Developed a **JavaScript/TypeScript/JSX** framework inspired by **NextJS**, integrating a real-time rendering engine for dynamic UI updates.

- Automated deployment via generation of **Dockerfile** and **Nginx** configurations, simplifying project production deployment.
- DeepSeek AI Clone – Interactive Chatbot** github.com/mohammedhrima/deep-seek-clone
- Developed a chatbot inspired by DeepSeek AI using **Next.js/React.js** and Tailwind CSS, enabling real-time user interactions.
  - Implemented conversation history storage using **MongoDB** and AI response management for a smooth user experience.

**Skills**

---

**Programming Languages:** C, C++ , JavaScript/TypeScript, Python, Bash

**Web Development:** ReactJS, NextJS, ExpressJS, NodeJS, Django, Flask, HTML, CSS, SCSS, Tailwind CSS

**DevOps & Tools:** Docker, Docker Compose, Git, GitHub, Linux

**Databases:** PostgreSQL, MySQL, MariaDB, MongoDB (NoSQL)

**Testing:** Cypress, Google Test

**Project Management:** MS Project, Trello

**Education**
